

HIV and Hepatitis Prevention Program Snapshot

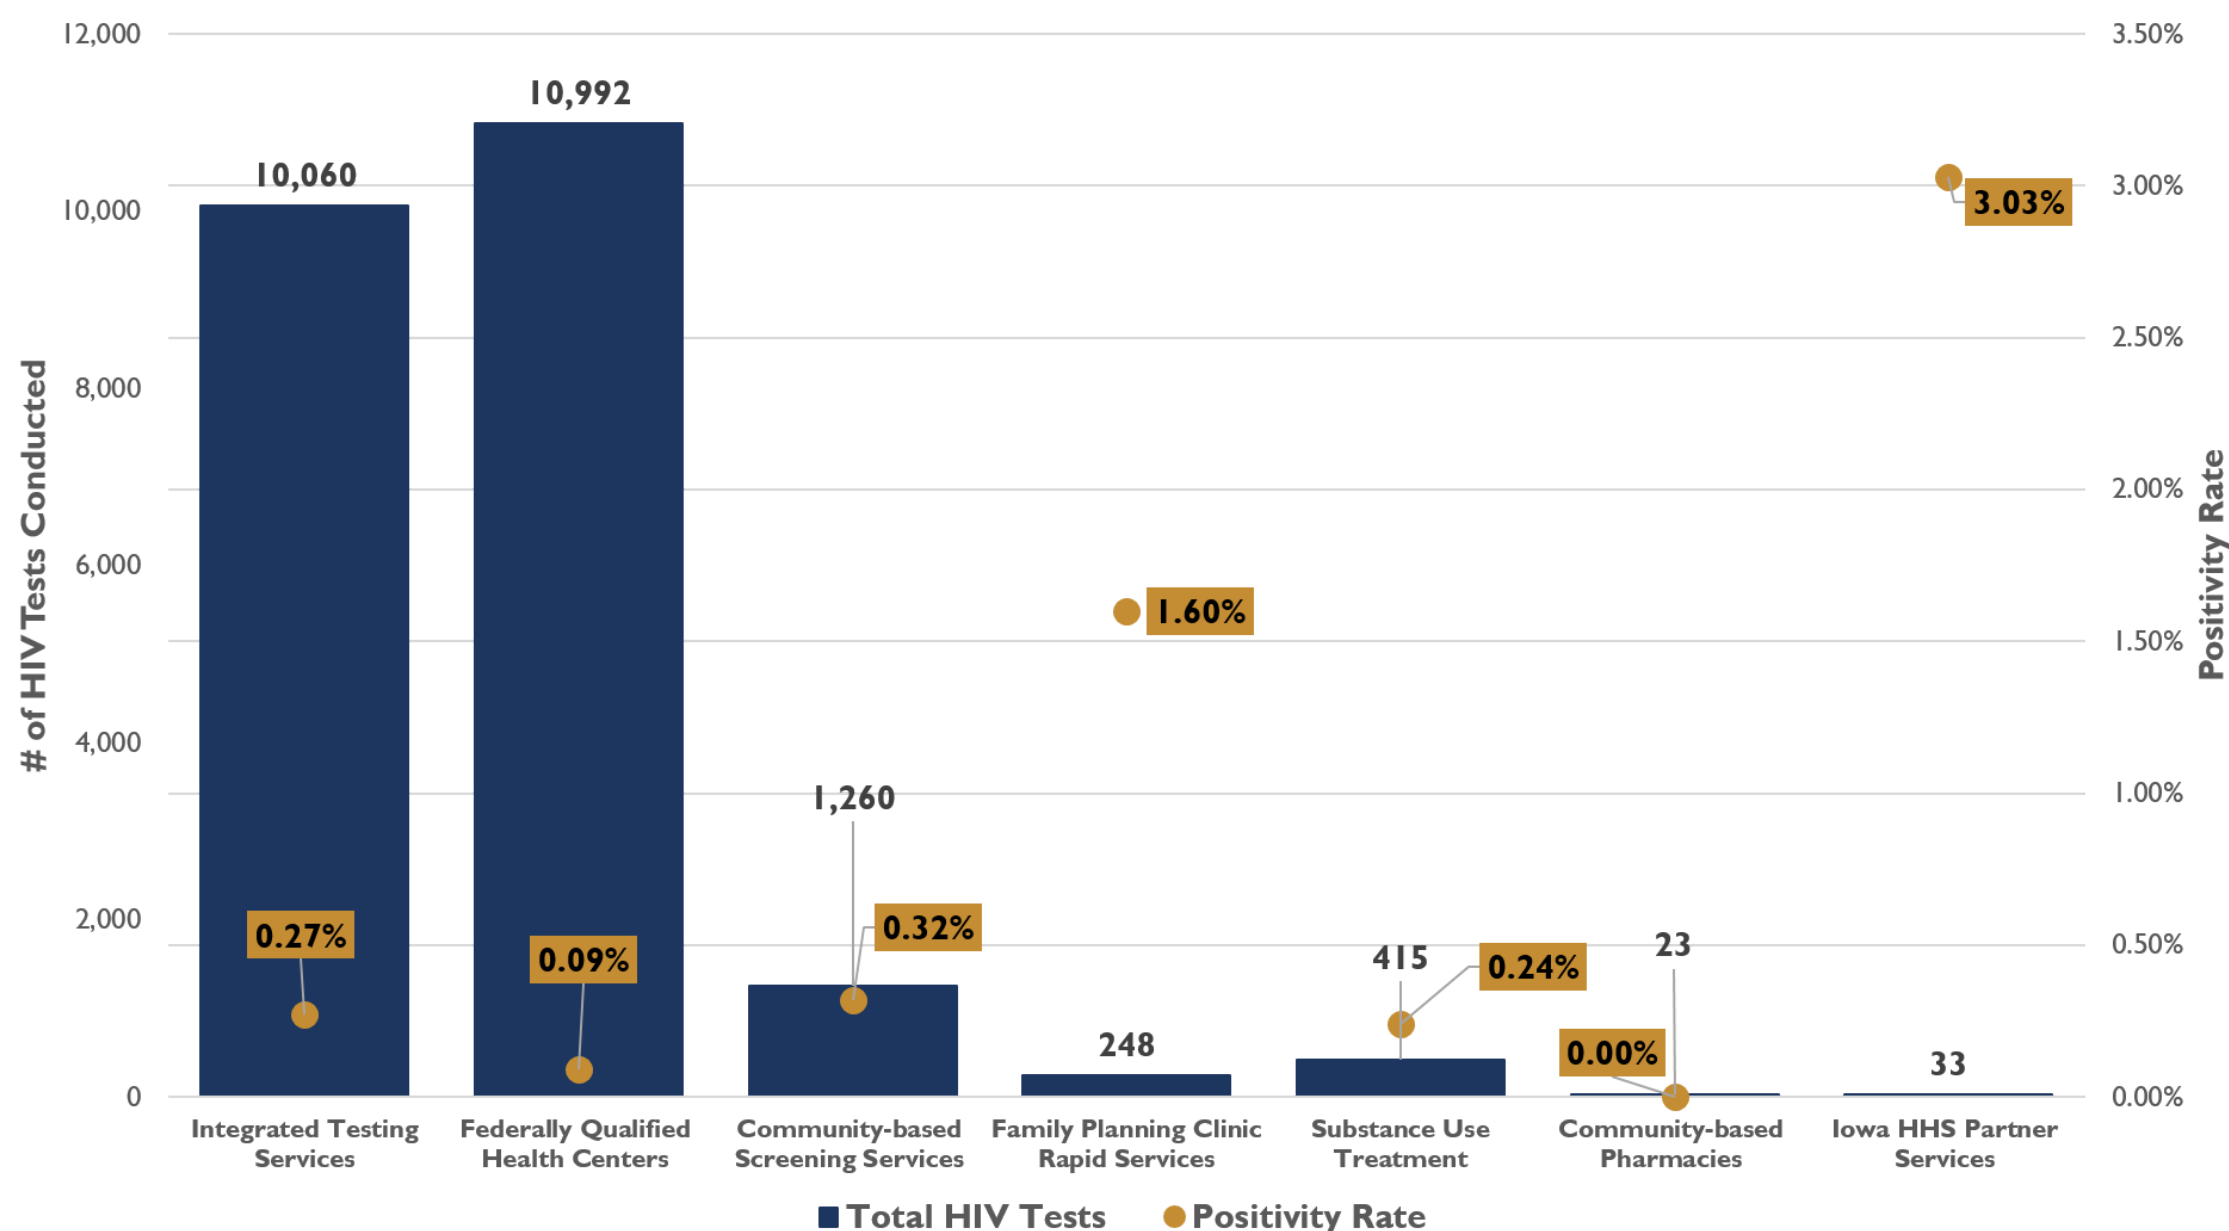

Program Supported HIV Screening: 2022

The HIV and Hepatitis Prevention Program partners with multiple stakeholders to support the strategic implementation of HIV testing services across Iowa.

In 2022, **23,031 rapid and conventional HIV tests** were administered in partnership with 73 agencies across seven major settings (an increase of 32.3% from 2021).

- 12 Integrated Testing Services Agencies** providing clinical and prioritized outreach testing that are funded by Iowa HHS to support the implementation of these activities. Each site provides services in a geographic region and dedicates a minimum of 1.0 full-time employee or equivalent to the project;
- 13 Federally Qualified Health Centers** working to implement routine screening into primary care encounters in partnership with the Iowa Primary Care Association;
- 22 Community-based Screening Services** projects working with Iowa HHS and the Family Planning Council of Iowa to provide safety-net STI screening services;
- 1 Family Planning Clinic** providing opt-out rapid HIV screening to clients accessing STI screening services;
- 14 Substance Use Treatment** locations integrating HIV screening into medically assisted treatment programs for clients with opioid use disorder, including many clients who have a history of injection drug use;
- 11 Community-based Pharmacies** providing free rapid testing in partnership with the Iowa Pharmacy Association; and
- 10 State Disease Intervention Specialists** providing free rapid and confirmatory HIV testing to individuals engaged in partner services.

Prevention Program Total HIV Testing and Positivity 2022

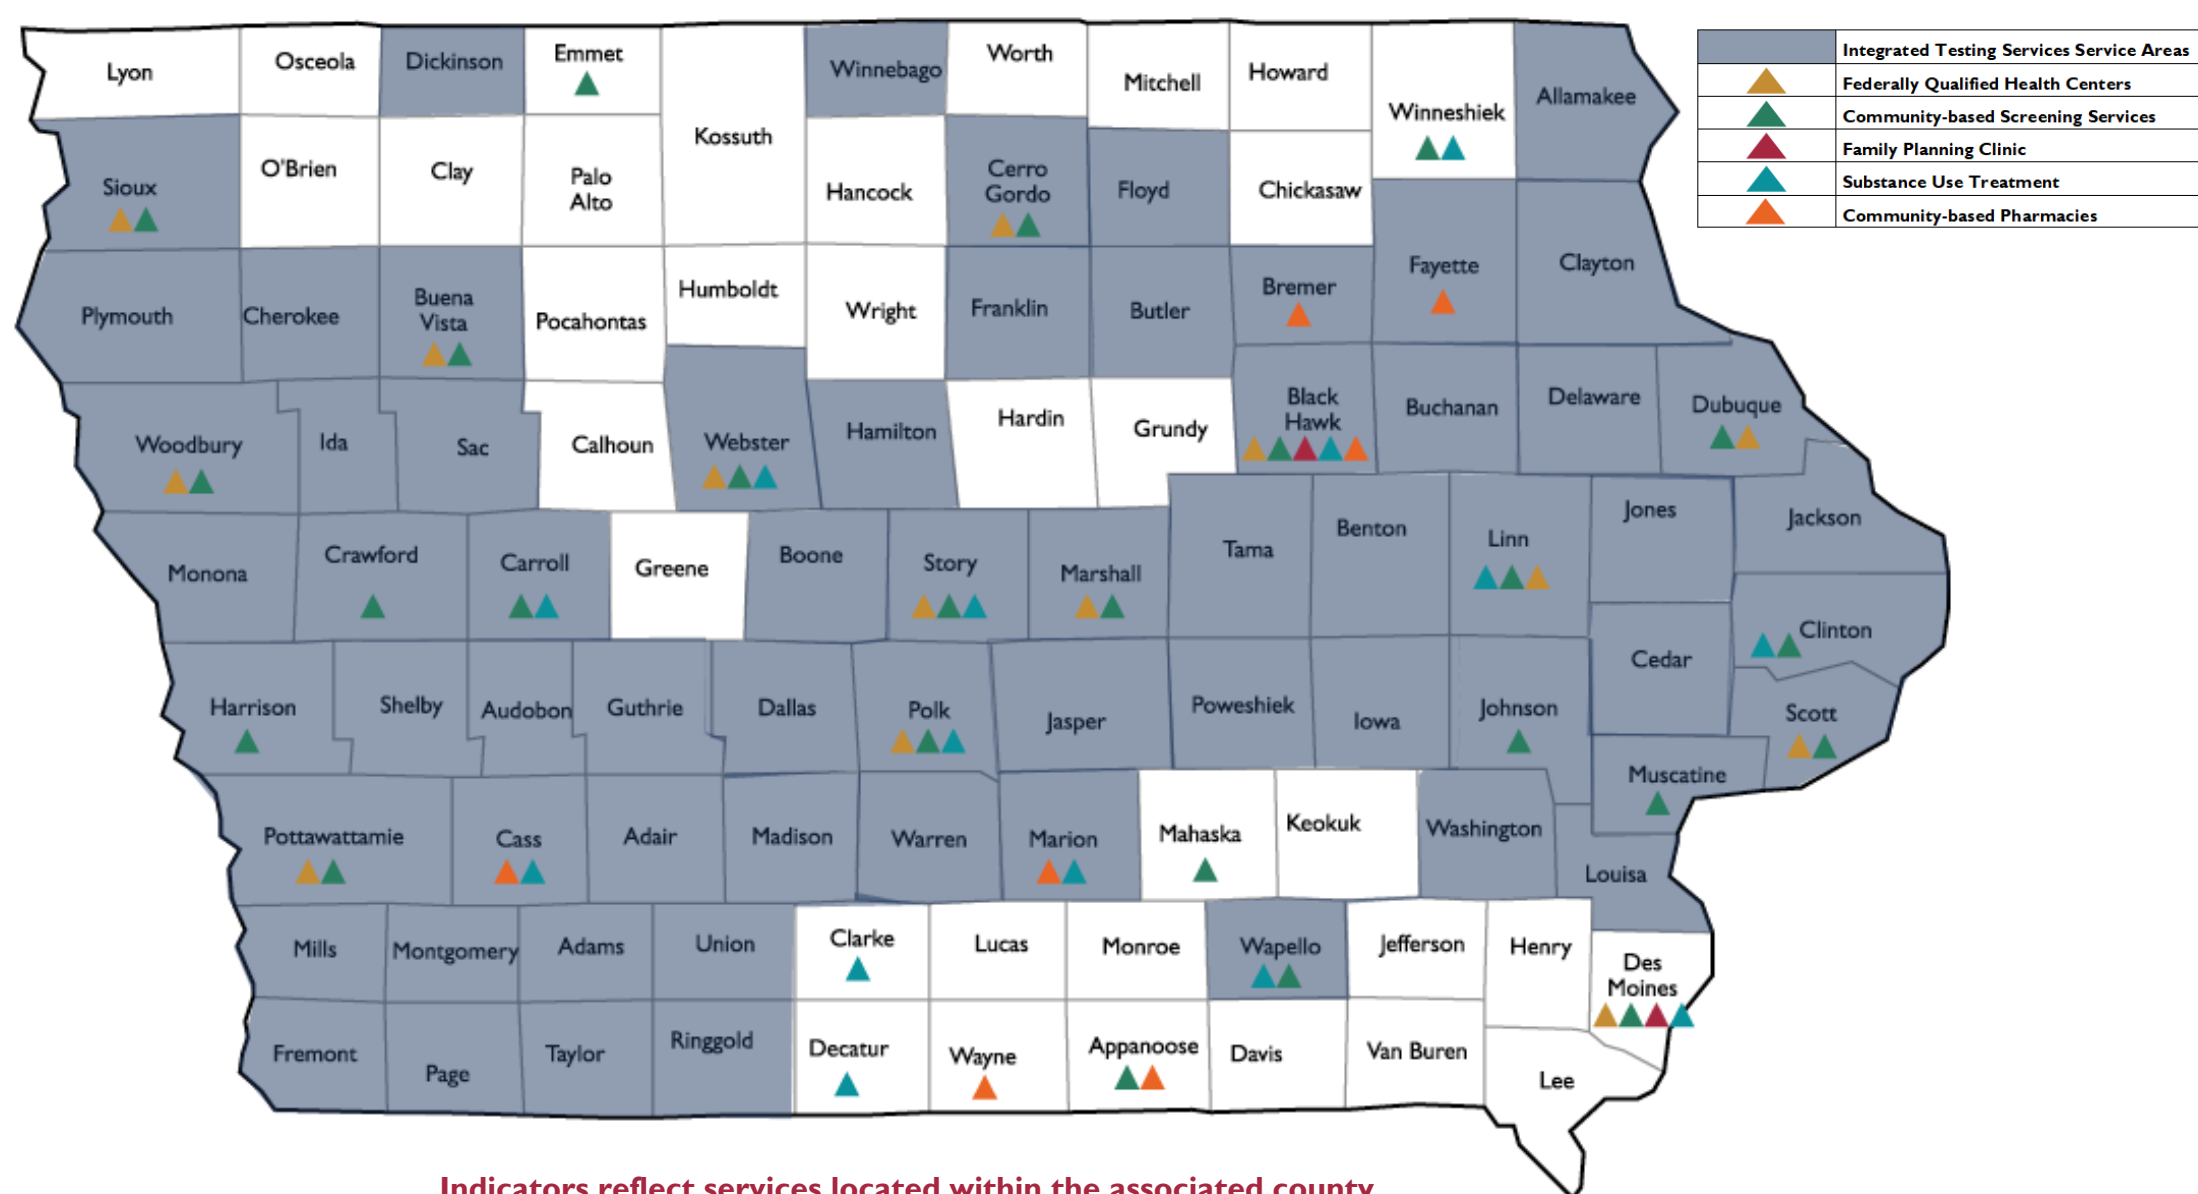

**Data are not de-duplicated. Numbers represent testing instances and not unique individuals.*

Across all projects, the program reported a 0.20% total positivity rate in 2022, down from 0.24% in 2021.

Iowa HHS partner services (provided by the 10 state Disease Intervention Specialists) had the highest positivity rate of any project reported at 3.03%. This can be attributed to the nature of Partner Services work, which involves active follow-up with individuals named as partners of or contacts to people who have been newly diagnosed with HIV and other reportable sexually transmitted infections including syphilis and gonorrhea.
